One last request,

Can you get half page bios from all you invited?

Jay

The bathymetry data has always been available on ourPassaic.org, in the Digital Library, under "Passaic River/Newark Bay Datasets".

Just so you know, there is no need to look for existing deep holes in Newark Bay for the CAD cells, because the Proposed Plan calls for digging holes in Newark Bay to create the CAD cells, should that method of disposal be chosen.

As to dredging in the navigation channel beyond the lower 2.2 miles, the Proposed Plan does call for dredging in RM2.2-8.3 (about 2 ft) bank-to-bank so that the cap does not cause additional flooding and to leave behind at least 10 ft of water depth to accommodate reasonable future recreational use identified by the municipalities. Any additional dredging in the navigation channel would not be governed by bathymetry, but by documented, reasonable commercial navigation needs.

Alice,

Now that we have the final program, would you please share with us the Bathymetric data for Newark Bay and for the mouth of two Rivers? We will get contour map for discussion during the meeting. This will show us if there are any deep holes for CAD cells and also the need to dredged beyond the proposed 2.2 miles.

Thanks

Jay

Please remove the “-EPA edits” from the file title, as it is mis-leading and unnecessary. Thanks.
